Title : Reflection of Underwater Life in the Ice of Lake Balaton.

Orig Pub : Magyar tud. akad. Tihanyi biol. kutatointezet. ovk., 1955-1956 (1957), 24, 87-92

Abstract : In the ice of the lake close to shore there is a large number of gas bubbles. Their total volume per m<sup>2</sup> of ice may be more than 1 liter. The number and volume of bubbles decrease toward the direction of the outer part of the lake up to a depth of 2 m; further on the ice is free of bubbles. The accumulation of bubbles is the result of assimilative activity of bottomland

Title : Corn in Hungary.

Orig Pub : Foldr. kozl., 1957, 5, No 1, 17-32

Abstract : Material on the cultivation of corn in Hungary, where it was introduced at the end of the 16th century, is presented. Now, it occupies 20-22 percent of the sown area and comprises 40 percent of the total yield of all crops. In quantity it is the most important crop in the country. Hungary is 9th in the world in corn production. The basic form of production is grain for fodder and silage;

<p>Paraprotein in blood serum. P. Balint, Z. Follos, and M. Lenner (Univ. Budapest, Hung.). <i>Biochim. Biophys. Acta</i> 2, 137-41(1948)(in English).—The amino acid content of serum proteins was detd. upon 1.5 ml. of serum from 20 normal and from 60 pathol. cases. Av. normal values are: tyrosine 4.5, tryptophan 1.1, cystine 3.5, arginine 2.6 and histidine 3.6 g. %. Eight of the 60 pathol. cases showed abnormalities in amino acid distribution.</p> <p style="text-align: right;">William M. Effect of hyaluronidase on resorption of protein and bacteria by means of the lymphatic vessels. Zoltán Eollos, Mihály Foldi, István Ruzsnyák, and György Szabó (Hungary). *Orosi Hétlap* 90, 711-12 (1949). Budapest, Hung.). Under the influence of hyaluronidase (I) the amt. of protein injected subcutaneously in dogs and resorbed by lymphatic vessels was increased 5 to 6 fold. The resorption of anthrax bacilli injected subcutaneously was increased 100 fold.

The effect of I, which consists of increasing the permeability of tissues and lymphatic vessels, is stronger with substances of higher mol. wt. István Foldi

AUTHORS: Széki, Pálma (Miss) and Eözlös, Zoltánné (Mrs.)  
TITLE: The Corrosion of MBV-Treated Aluminium in Alkaline Media

PERIODICAL: Kohászati lapok, 1960, No.1, pp.38-40

TEXT: In many industrial applications, aluminium is subjected to the attack of alkaline media and it was thought that sealed anodic films might improve the resistance to corrosion. In the absence of published data, experiments were carried out on 99.5% purity aluminium sheets. Half of the specimens were oxidized for 30 minutes according to the modified Bauer-Vogel process and sealed by holding for 1 hour in 100°C steam, the other half was simply degreased in benzene for control purposes. Then, the specimens were placed into solutions of 8.1, 8.6, 8.9, 9.5 and 9.9 pH (made of sodium hydroxide and of tartaric acid) and kept for 26 days at 40°C. They were inspected and weighed every 3 to 4 days. The solutions were changed on the 22nd day because, especially with untreated specimens, a large amount of  $Al(OH)_3$  accumulated in solutions of higher pH. The discolouration of specimens and segregation of  $Al(OH)_3$  in the solution was considerably

delayed by the anodic film and whilst the untreated sheets were perforated in solutions of 9.5 and 9.9 pH, only one pinhole was observed in the anodized specimen exposed to the 9.9 pH solution. The weight of loss was rapid initially but slowed down when most of the NaOH was used up only to speed up slightly again when, according to W.J.Müller and E.Löw (Ref.1: Aluminium, 1938, p.257) the accumulated sodium-aluminate hydrolysed, producing more NaOH:  
$$\text{Al(OH)}_2\text{ONa} + \text{H}_2\text{O} = \text{Al(OH)}_3 + \text{NaOH}.$$

The averaged weight loss was as follows:

pH of solution	Weight change in mg/dm <sup>3</sup> day	
	MBV treated	Untreated
8.1	- 0.1076	- 0.3114
8.6	- 0.1692	- 0.7538
8.9	- 0.4538	- 1.9577
9.5	- 0.9000	- 2.8230
9.9	- 1.9384	- 5.3152

E190/E435

Hence, from a comparison with the behaviour of untreated aluminium, MBV treatment (combined with sealing) shifted the resistance by 1 pH value towards the more alkaline solutions. There are 2 figures, 2 tables and 1 non-Soviet-bloc reference.
